1. Introduction

ROMANIAN RESEARCH ASSESSMENT EXERCISE (RRAE) is the essential component of the "Doctorate in Universities of Excellence – Research Assessment and Support for Scientific Publishing" strategic project, a project financed by The Sectorial Operational Programme for the Development of Human Resources (SOPDHR) and undertaken by The Executive Agency for Higher Education, Research, Development and Innovation Funding (EAHERDIF) between 2008-2011.

The Exercise's objective is the quantitative and qualitative evaluation, with regards to specific scientific domains and international standards, of the scientific research conducted in Romanian universities. This assessment is based on *The General Methodology* [1], which is further divided by domains in *The specific guide books of the evaluation domains* [2], developed in the project, through the considerable involvement of the national academic community and with the endorsement of an international panel of experts.

At the end of The Exercise for each of the forty two domains of scientific research identified in the project, a hierarchy of Romanian universities will result based on the obtained research performances.

RRAE results will permit formulation of legislative proposals regarding research financing to be strongly connected to the achieved performances and to the perspective of sustainable development of the universities. This perspective will stimulate the competition between universities, the participation of Romanian researchers in the international networks of research, and the increase of visibility and academic prestige in a global context. At the same time, The Exercise itself proposes to identify the universities whose potential and strategic programme can generate excellence, thus backing the realization of the *Excellency Universities in Romania* programme, a programme elaborated in the frame of the present project [3].

The Assessment Electronic Platform (Romanian acronym SISEC) is the informatics infrastructure, developed in the project. SISEC follows three main objectives:

- (i). to mediate the introduction by universities of the information on which the evaluation is based (Data gathering module);
- (ii). to provide informatics support for the qualitative evaluation in a *peer-reviews*ystem (*Evaluation module*);
- (iii).to generate reports on the scientific research conducted in the universities in formats requested by various stakeholders (*Reporting module*).

The platform will allow the periodical monitoring of research results and the identification of excellence groups whose financial support will contribute to the increase of visibility of Romanian scientific research. As the qualitative evaluation will also be conducted by foreign experts, all the descriptive fields from SISEC will be filled out in English by researchers and domain coordinators from the universities.

The structure of the actual *Evaluator's Guide Book* is the following:

- in Chapter 2 (Evaluation Methodology) the evaluated domains, the four criteria and the
 accompanying descriptors are shown, next to the duties of participants in the evaluation
 process;
- in **Chapter 3** (*Electronic Evaluation File*) the structure of *The electronic file* generated by SISEC on the basis of the information introduced by the universities and subjected to both evaluations: quantitative (performed automatically) and qualitative (through *peer-review* activity of the Romanian and foreign evaluation experts), is shown;
- in **Chapter 4** (*Evaluator's work Guidelines*) the steps followed by the evaluator to access SISEC and to perform the qualitative evaluation of the files which are automatically allocated by the electronic platform, are shown in detail;
- in **Chapter 5** (*Panel Coordinator's Work Guidelines*) the responsibilities and the stages followed by the panel coordinator in RRAE are shown.

Further, after the **Bibliography** section, the document contains a detailing of the significance of quality levels specific to each domain, a particularization undertaken by the Evaluation panels for each domain in the process of elaborating the *Evaluation Methodology* (**Annex 1**), the scheduling of meetings of the *Evaluation panels* (**Annex 2**), *Templates for Reports generated during RRAE* (**Annex 3**) and, finally, explanations of the terms used in RRAE – *Glossary of terms* (**Annex 4**).

2. The Evaluation Methodology

The elaboration of evaluation methodology of scientific research in Romanian universities, on the basis of which the current *Research Assessment Exercise* takes place, was conducted between December 2008 and April 2010 and is presented in detail on the Web page of the project [1 and 2]. The methodology is based on a *peer-review* evaluation process, with national and foreign evaluators, being an evaluation by research domains. The taxonomy of the specialty domains is intended to provide a referential framework to The Exercise, highlighting affinities and connections between domains, structured in *Domains groups* and which must be treated consistently by the evaluators. The 42 domains used in RRAE are listed below:

Group I - Natural Sciences

- 1. Mathematics
- 2. Informatics
- 3. Physics
- 4. Chemistry
- 5. Geology and geography

Group II- Engineering Sciences

- 6. Civil engineering and installations
- 7. Mechanical engineering and mechatronics
- 8. Aerospatiale engineering
- 9. Transportation
- 10. Chemical engineering
- 11. Materials science
- 12. Oil, gas and mines
- 13. Industrial engineering
- 14. Electrical engineering
- 15. Energetics
- 16. Electronics and telecommunications
- 17. System engineering
- 18. Computers and information technology
- 19. Biotechnologies, food security and engineering
- 20. Environmental sciences

Group III - Social and Economic Sciences

- 21. Law and administrative sciences
- 22. Economic sciences
- 23. Military sciences, security and information
- 24. Political sciences and international relations
- 25. Communication and media
- 26. Sociology, anthropology and social assistance
- 27. Psychology
- 28. Education science
- 29. Sports

Group IV - Human Sciences

- 30. Philosophy
- 31. History
- 32. Theology and religious studies
- 33. Philology

Group V - Arts and Architecture

- 34. Cinematography and performing arts
- 35. Music
- 36. Visual arts
- 37. Architecture and urbanism

Group VI – Life Sciences

- 38. Biology
- 39. Agriculture and forestry
- 40. Veterinary medicine and zootechny
- 41. Medicine
- 42. Pharmacology

In the current Romanian Research Assessment Exercise the following four criteria are used [1]:

- Criterion I: The results obtained in the activity of scientific research;
- Criterion II: The environment of scientific research;
- Criterion III: The prestige in the academic community;
- Criterion IV: Financial resources brought for the scientific research.

Each of these four criteria has a specific weight and a set of descriptors, as follows.

CRITERIA	DESCRIPTORS
I. The results obtained in the activity of scientific research(Scientific Output) (60 – 70 %) Maximum 3 indicators	 Articles: Publications rated Web of Science; Published in proceedings of scientific events; Magazines from international data base. Scientific books of author and chapter books Translations Patents Copyrights Protected Achievements Socio-Economic Products (products and/or innovative services with an socioeconomic impact which can be demonstrated)
 II. The environment of scientific research (Research Environment) (10 – 30 %) Maximum 4 indicators 	 PhD Advisors Organization of Scientific Events Youth Research Program (Mechanisms to attract young researchers) Research infrastructure Access to scientificliterature Edited volumes Edited translations
 III. The prestige in the academic community(Academic Recognition) (5 – 15 %) Maximum 3 indicators 	 Invited Professor Invited Lectures Citations and reviews of author's creations Member of Romanian Academy, of branch academies and foreign academies
 IV. Financial resources brought for the scientific research (Research Contracts) (5 – 10 %) 1 indicator 	 Funds drawn for research from national and international contracts.

The quantifying of descriptors is done by a set of formulas elaborated by the project team together with the 42 domain coordinators, on the basis of the national and international experience in research

evaluation. The mathematical relations which lead to the numerical values associated to each o evaluation criterion are specified in *The detailed presentation of the evaluation formulas which are going to be used in Romanian Research Assessment Exercise* [4]. The indicators which resulted so forth contain two distinct levels of evaluation: a quantitative and a qualitative one. The quantitative evaluation is automatically performed by the informatics platform, on the basis of the registered information, while the qualitative evaluation is conducted by the evaluators, on the basis of the documents subjected to analysis.

The evaluation procedure from a certain research domain follows, successively, the next stages:

- 1. The qualitative and quantitative evaluation of files by each criterion is done, every file receiving (based on evaluation formulas) four numerical values, each for every criterion.
- 2. The files are ranked by each criterion, thus resulting in four hierarchies, each for every evaluation criterion.
- 3. The files from the top of the four hierarchies will receive a maximum number of points (according to [1]). These values are indicated in the table below.
- 4. The other files receive a number of points which is proportional to the numerical value received for that criterion.
- 5. The total number of points of university file (for the evaluated domain) is calculated by adding the number of points received for the four criteria.
- 6. Finally, the ranking of files by a research domain is done depending on the total number of points received.

	Natural Sciences	Engineering Sciences	Social and Economic Sciences	Humanist Sciences	Arts and Architecture	Life Sciences
Criterion I	70 points	65 points	60 points	60 points	60 points	60 points
Criterion II	10 points	15 points	15 points	15 points	30 points	20 points
Criterion III	10 points	10 points	15 points	15 points	5 points	10 points
Criterion IV	10 points	10 points	10 points	10 points	5 points	10 points

The maximum points corresponding to the four criteria for each group of domains established in The General Methodology of Evaluation [1].

⇒ By researchers, according to this guide, we understand the didactic staff and the researchers employed bythe university as of 31-st of December 2010.

Each researcher will have an individual account in **Assessment Electronic Platform (**Romanian acronym*SISEC*), through which she/he will introduce all the information subject to evaluation.

Attending PhD students who don't have an employment contract with the university will have an individual account in **Assessment Electronic Platform** (Romanian acronym*SISEC*) by which they will introduce all the information subject to evaluation.

Criterion I, II and III imply both a quantitative evaluation (automatically achieved by SISEC) and a qualitative one, performed by the evaluators through the framing of the elements subjected to the qualitative evaluation by quality levels. Criterion IV contains just the quantitative component. The information necessary for the evaluation by the criteria I and III are obtained from the individual data introduced in SISEC by the researchers, while the information needed for the evaluation of the Criterion IV are introduced by the domain coordinator from the university. At the criterion II the information required by the "PhD Advisors" descriptor are introduced by the researchers (if they have the position of a doctorate supervisor), the rest of the information being introduced by the domain coordinator from the university.

- RRAE calls for two categories of actors involved in the process:
 - the universities, represented by rectors, domain coordinators, researchers and attending PhD students (they don't have an employment contract with the university);
 - the national and foreign evaluators.

At the **university** level, **the rector** selects from the list of the forty two domains subjected to evaluation the domains which are covered in the university. The rector will also establish the domain coordinators and the list of researchers and post-graduates for each research domain; he/she will introduce and will validate through the platform the data required at the university level and in the end he/she will validate all the elements which will be entered into the evaluation process. On the basis of the lists with the identification data of the researchers and the PhD students and of the list with the identification data of the domain coordinators, established by the rectors, the accounts for the domain coordinators, researchers and post-graduates will be generated.

The domain coordinator is the person appointed by the rector as a responsible for the research evaluation for a certain domain covered by the respective university. He/She introduces the information for criteria II (*Research Environment*) and IV (*Research Contracts*), debugs the error messages (SISEC) and validates the data introduced by the researchers in the respective domain.

The researchers and the PhD students will register in SISEC the scientific production (Criterion I) and each researcher who has a non-null scientific production on a certain descriptor has to introduce in SISEC, for the qualitative evaluation, 10% (but not less than one element) from the scientific production accompanying that descriptor (for example, articles, books and so on). The researchers will register in SISEC

the accompanying information to the prestige in the academic community (Criterion III), also. The researchers who have the right to supervise doctorates will introduce in Criterion II (*Research Environment*) the information afferent to "PhD Advisors" descriptor; the rest of the information specific to The Criterion II shall be introduced by the domain coordinator.

The evaluators have access, through SISEC, to the integral electronic files allocated for the evaluation, thus having the possibility of a complete picture of the achieved performances in scientific research for the universities, by the evaluated domains.

The national and foreign evaluators will analyze from the qualitative point of view a part of the information registered by the universities with the electronic platform as follows:

- For Criterion I, the qualitative evaluation is done only for 10% of the scientific production. For every element subjected to the qualitative analysis in the frame of Criterion I (articles, books etc.), the evaluators will choose explicitly one of the four quality levels described below.
- For criteria II and III all the information introduced in SISEC by the universities will be qualitatively evaluated. The evaluators will indicate just the number of elements (for example, scientific events, edited volumes and so on) accompanying each quality level.

According to General methodology of evaluation [1], in the frame of RRAE, the evaluators will choose for each element subjected to qualitative evaluation one of the following four quality levels:

- top international;
- international;
- national;
- local.

The detailed description of these levels of quality is specific to each evaluation domain and it is presented in **Annex 1** of the current Guide Book.

3. The Electronic Evaluation File

The electronic evaluation file (later called Evaluation file or just File) is associated to a domain of science from a certain university and it contains the entire information provided by the University for (quantitative and qualitative) evaluation in RRAE, by the respective domain.

Beside the elements subjected to the evaluation, the evaluation file also contains the general information specific to the university and the evaluated domain.

The electronic file is organized in three sections:

Section I: General data which contain the following information:

- I.1 General data about the university introduced by Rector;
- I.2 General data about the evaluated domain introduced by the domain coordinator (number of researchers, number of PhD students, specific information domain available for the domain coordinator);

I.3 Information about the number of elements uploaded to SISEC for each Criterion and Descriptor.

SectionII: **Data for** *qualitative evaluation,* where will be presented to the evaluator the elements subjected to the evaluation, *in an interactive way,* on each descriptor as follows:

- at Criterion I for each descriptor 10% of the scientific production will be posted (the selection of the elements being done by the researchers);
- at Criteria II and III all data will be posted.

Every element subjected to the qualitative evaluation, together with the afferent information (text domains, *.pdf files, etc.), will be accompanied by a *drop-down list*, through which the evaluator will select one of the quality levels (top international, international, national or local) and by a text area, where the evaluator will provide the arguments for his decision.

Section III: Integral data, which allows the evaluator to visualize the entire information referring to the evaluated domain, introduced for the domain by the researchers, domain coordinators and university, for all four evaluation criteria.

The electronic platform (SISEC) ensures a functionality by which the electronic file can be saved in a *.pdf file format), a file which can be stored on a removable storage (e.g. DVD) or can be printed. This Electronic file will be validated by the domain coordinator from the university and in the end by the Rector before the assessment process begins.

4. Evaluator's work guidelines

The evaluators are prestigious researchers from Romania and abroad, selected after a large consultation of the academic community. They will analyze and assign one of the four quality levels defined in *General methodology of evaluation* [1], the information registered by the universities in SISEC and destined for the qualitative evaluation. These represent 10% of the total of information from Criterion I. They will also evaluate the integral information uploaded at Criteria II and III.

In RRAE, the evaluators will perform their activity, successively following these stages:

Stage I: online

- a. The evaluator accesses SISEC using the identification data (*username*, *password*) received by *e-mail* from the electronic platform administrator;
- b. See The Evaluator Guide Book specific to the domain.
 This guide is available in English, in his/her SISEC work space. When he/she has doubts/questions regarding the unfolding of the evaluation procedure, the evaluator can consult the Panel Coordinator;
- c. In his/her work space, he/she identifies the electronic files which were automatically allocated to him/her by the electronic system for the qualitative evaluation. For each file, if conflicts of interests are not detected, he/she will accept the file for the evaluation, selecting the proper option from SISEC. If not, he/she refuses the file evaluation and he/she will receive another file for the evaluation, from the Evaluation panel coordinator.
- d. The proper qualitative evaluation of each file:
 - i. The evaluator will examine the entire file (the second section of *The evaluation electronic file*) in order to make an overview of the evaluated domain from the university;
 - ii. As presented in Chapter 2 (of this guide book), the qualitative evaluation will be done only for 10% of the scientific production (Criterion I) and integrally for Criteria II and III. The elements subjected to the qualitative evaluation are included in the first section of *The evaluation electronic file*, file available to the evaluator. For each of these elements, SISEC will make available to the evaluator all the information introduced by the universities for the qualitative evaluation (e.g. files in *.pdf format containing the scientific article, book,chapter, etc.);
 - iii. For each element subjected to the qualitative evaluation, based on the existing information in SISEC, the detailed description of the quality levels presented in **Annex 1**

and the personal scientific expertise, the evaluator must choose one of the four quality levels and provide (in the respective domain from SISEC) arguments for the choice he/she made.

e. At the end of the qualitative assessment process of a file, the evaluator will fill in and will sign *The* evaluation report (see **Annex 3** of this guide book) for that file. This report will contain statistical data resulted after the evaluation (data automatically generated by SISEC), together with the general notes/assessments of the evaluator for that file. The report will be electronically filled in, on SISEC, immediately after the *online* evaluation, will be subsequently printed, signed by the evaluator and sent to the project management team.

Stage II: in panel

- a. For the Panel meeting, the evaluator will check the other evaluator's assessment results (without knowing their identities) and the arguments already presented by them, results accessible in SISEC only after the *online* evaluation stage is completed, when the evaluators can no longer modify the assessments.
- b. The evaluator is invited to attend the meeting (working session) of The Evaluation Panel, a meeting mediated by the Evaluation Panel Coordinator. The schedule of the Panel meetings is shown in **Annex 2** of this guide book;
- c. The evaluator will be able to participate in the on-site visit at the evaluated universities, a visit which will be correlated with the panel meeting, elaborating *A report on the on-site visit for the domain*, according to the model shown in **Annex 3** of this guide book. The scheduling and participation in the on-site visits will be established by the project management team;
- d. The evaluator will participate to the elaboration and he/she will sign *The report of the meeting in the Panel,* according to the model shown in **Annex 3** of this guide book;
- e. The evaluator will sign, alongside the other members of the Panel and the Panel coordinator, the final report of the ranking of files by domains, according to the model shown in **Annex 3** of this guide book.

5. Panel Coordinator's work guidelines

As established in *General Methodology* [1], the Panel Coordinator doesn't evaluate the universities' files, his/her role being that of coordinating the activity of The evaluation panel, of mediating the discussions from the Panel in order to reach a consensus in establishing the quality levels subjected to the qualitative evaluation and to conduct the reports generated in the assessment process, reports whose model is shown in **Annex 3** of this guide book. His/her activity will follow the next steps:

Stage I: online

- a. He/she logs on to SISEC, using the *username* and the *password* received by *e-mail*, from the platform's administrator;
- b. Consults *The Evaluator Guide Book* specific to the domain. This guide is available in English, in his/her work space at SISEC;
- c. In his/her work space, he/she identifies the files uploaded by the universities and the complete list of the evaluators from the Panel he/she coordinates;
- d. He/she identifies the way SISEC automatically allocated the files to the evaluators and points out to the management team of the project the eventual incompatibilities;
- e. He/she receives (by SISEC) from the evaluators the agreement/refuse to assess the allocated file.
 In a case of a refused file, he/she allocates that file to another evaluator, pointing out this allocation to the project management team;
- f. During the *online* qualitative evaluation, the panel coordinator solves the eventual doubts/questions received from the evaluators. If it's necessary, he/she contacts the project management team;
- g. He/she points out to the project management team any dysfunctionality which can show up during the *online* qualitative assessment.

Stage II: On-site Visits and Panel Meeting

- a. He/she prepares the field visits and the panel meeting, assuring the fact that all the evaluators had accessed/visualized the results of the *online* qualitative evaluation done by the other members of The Panel;
- b. He/she mediates the discussions in The Panel in order to reach a consensus on the allocation of the quality levels for all the elements subjected to the qualitative evaluation;

- c. After the discussions in the panel meeting finalize, he/she assures the filling in and the signing by the participants of *The Report of the meeting in Panel*;
- d. Based on the Report of the panel meeting, he/she introduces in SISEC (with the technical support of the Panel assistant) the final values of the quality levels for the elements subjected to the qualitative evaluation.

Stage III: Finalizing the evaluation process and the classification of the universities on the domain

- a. Using the final results of the evaluation (quantitative and qualitative) provided by SISEC, he/she fills in and signs together with the other members of The Evaluation Panel *The Final report of the raking of files by domain*(according to the model from **Annex 3** of this guide book);
- b. He/ she gives to the project management team this *Final report* on the evaluation in RRAE;
- c. For the file with the highest score, he/she presents a comparison concerning the elements from Criterion I with the top universities in Europe, conducting A Report of benchmarking (according to the model from Annex 3).

Annex 1. Particularization of the quality levels meaning according to the specific methodology of the domain Chemistry[2]

The descriptors and the quality factors specific to the three qualitatively evaluated criteria, for the Chemistry panel are presented below.

2.4.1. Criterion I: The results obtained in the activity of scientific research

In the frame of this criterion the analysis of the scientific production of each researcher reported by the university in the Chemistry domain is taken into consideration. The evaluation is both qualitative and quantitative and it is realized on the basis of the individual information of the researchers.

The descriptors are:

Scientific articles

Description: *only the ISI articles published in the last five years* will be taken into consideration, which have the evaluated university as the institutional affiliation.

Quality factor:

Top international level

- Articles published in magazines from the general category: Angew. Chem., JACS, Chem.
 Eur. J., Chem. Comm.;
- Review papers published in: Chem Rev., Chem. Soc. Rev and Acc. Chem. Rev.

International level

- Articles published in magazines from the first quart of each chemistry subdomain (according to ISI Thomson)
- Review papers published in magazines like: Coord. Chem. Rev., Adv. Polym. Sci, Adv.
 Cat., Prog. Polym. Sci.

National level

 Articles published in magazines from the second ¼ part of each chemistry subdomain list (according to ISI Thomson classification)

Local level

- Articles published in magazines from the third and fourth quart of each chemistry subdomain list (according to ISI Thomson classification)
- Books and books chapters

Description: the scientific books of author published at the foreign publishing houses (Academic Press, Wiley, Oxford University Press, Cambridge University Press, Elsevier, Springer, Birkhauser, CRC Press, World Scientific), the chapters in scientific books published at the foreign publishing houses mentioned above and the scientific books of author published at the Romanian Academy Publishing House and Technical Publishing House will be taken into consideration. Only those Books and book chapters which have the evaluated university as the institutional affiliation will be taken into consideration. Bookswith a didactic character are excluded from the evaluation.

Quality factor:

Top international level

- Volumes and/or chapters of books with a strong impact to the development of a domain's research, accompanied by very favorable reviews in prestigious international journals
- The International level of the publishing house

International level

- Volumes and/or chapters of books published in international publishing houses with a lower visibility.
- The International level of the publishing house

National level

Volumes (chapters of books) published in Romanian Academy Publishing House,
 Technical Publishing House, eventually in an international circulation language.

Local level

- Volumes (chapters of books) published in national publishing houses
- Patents

Description: national patents, international patents, which have the evaluated university as the institutional affiliation, will be taken into consideration.

Quality factor:

Top international level

Applied patents, with a strong impact in the development of a technology or a product

International level

International patents, which aren't applied in practice.

National level

National patents applied in the productive sector

Local level

National patents which aren't applied in the productive sector

2.4.2. Criterion II: The background of scientific research

In the frame of this criterion the dynamics of the background of the scientific research in Chemistry domain is analyzed, on the basis of the individual information of the researchers and of the information which was directly received from the university.

The descriptors are:

PhD advisers

Description: The quality of the PhD advisers is determined by the evaluators on the basis of the publications resulted from the doctoral theses. It will be observed whether young Ph.D. students, after getting their Ph.D., obtained postdoctoral stages in prestigious institutions or ones which are financed by famous organizations (Humboldt Foundation, Marie Curie scholarships, important foreign universities etc.). Also, the professional route of the young Ph.D. students after they received their Ph.D. will be observed.

Quality factor: Is established depending on:

- (1) The number and the average quality of the publications resulted from the finalized doctoral theses. The same quality factors as the Scientific articles from Criterion I are used.
- (2) The number of the young Ph.D. students who, after getting their Ph.D. were accepted at the prestigious universities (Shanghai and /or Times classification) to attend post-doctoral stages.

Top international level

Marie Curie, Humboldt scholarships or those of Top 100 Universities;

International level

post-doctoral scholarships in Top 500 Universities;

National level

Romanian universities or Institutes of the Romanian Academy.

There is no local level.

Access to scientific literature

Description: Research activity of an international level can't be achieved in the absence of up to date documentation sources. Will be followed the number of the subscriptions of one universities to journals from Chemistry domain.

Quality factor: Is established depending on the international or national importance of the magazines/publishing houses to which the university has the access.

Top international level

Subscriptions to SciFinder, ACS, RSC, Wiley, ScienceDirect.

Specialty monographs published at great international publishing houses in the last 5 years.

International level

- Subscriptions to ScienceDirect, Springer.
- Specialty monographs published abroad.

National level

- Subscriptions or collections of scientific magazines on a reduced importance.
- Specialty monographs published in Romanian language.

Local level

- Libraries with an especially didactic material.
- Mechanisms to attract young researchers

Description: The activity of research means a competitive infrastructure and researchers with synchronic concerns with those from the world research, the one that can attract foreign and Romanian post post-graduates. Will be followed the number of the postdoctoral researchers from a university, who activate in the Chemistry domain.

Quality factor: Is established depending on:

(1) the offered research topic (ongoing projects, their originality and actual character);

Top international level

- participation to the excellence networks of the European Union;
- participation to FP6, FP7, COST projects

International level

 participation to bilateral international projects, conventions of collaboration with universities from abroad.

National level

■ CNCSIS, PNII grants

Local level

- conventions of collaborations with partners or laboratories without a National level
- (2) Research infrastructure.
- Research infrastructure

Description: There will be appreciated the investments of the universities in equipment and high technologies for an advanced research.

Quality factor:

Top international level

 laboratories which are equipped with performing, complex equipment that can assure the technical support for the achievement of a research which has an original, international level topic

International level

 laboratories which are equipped with performing equipment which can assure active collaborations with other institutions in order to develop research projects with country or abroad partners

National level

• laboratories equipped with the apparatus, which can assure collaborations with other institutions.

Local level

• laboratories equipped with the apparatus which helps to a routine research.

Criterion III: The prestige in the academic community

In the frame of this criterion the prestige of the researchers of a university who activate in the Chemistry domain is analyzed by the academic community. The analysis is done on the basis of the individual information from the researchers.

The descriptors are:

- Papers invited to the famous international conferences
- Visiting professor at the famous universities
- Citations

Quality factor: On the basis of the information filled in by each researcher in the respective domains of the descriptors from the criterion III, an university can receive, on a certain domain, one of the following marks:

Top international level

- Hirsh parameter higher than 18
- Over 2000 citation/professor
- 3 invited/key note lectures in the last 5 years
- 1 invited professor in the last 5 years at an university form top 500
- 1 international prize

International level

- Hirsh parameter between 12 and 17
- Over 1000 citation/professor

- 1 invited/key note lectures in the last 5 years
- o 1 invited professor in the last 5 years at an university form top 500

National level

- Hirsh parameter between 6 and 11
- Over 700 citation/professor

Local level

- Hirsh parameter lower than 6
- Over 200 citation/professor

The following are added to the marks above:

- (1) the number of invited conferences (*plenary lectures, invited lectures, keynotes*) to the international conferences/congresses;
- (2) invited seminars to prestigious universities;
- (3) the number of visiting professor positions to prestigious universities;
- (4) awarded prizes;
- (5) articles in the tops of the most accessed/cited articles published by an ISI journal.

1.4.4. Criterion IV: Financial resources brought for the scientific research

The evaluation with regards to criterion IV is totally quantitative, being achieved automatically by the informatics platform of the assessment, without the involvement of the evaluation experts. This evaluation is done on the basis of the research contracts reported by an university on a certain domain, on the evaluated period.

Annex 2. Panel Meetings Schedule

Period	Panels					
22 th – 24 th of August 2011	P4 - Chemistry	P7 - Mechanical engineering and mechatronics	P27 - Psychology	P34 – Cinematograph y and performing arts		
24 th - 26 th of August 2011	P32 - Theology and religious studies	P8 - Aerospatiale engineering	P21 - Law and administrative sciences	P2 - Informatics		
29 th - 31 st of August 2011	P1 - Mathematics	P37 - Architecture and urbanism	P30 - Philosophy	P26 - Sociology, anthropology and social assistance	P14 - Electrical engineering	P29 - Sports

Annex 4. Glossary of terms used in RRAE

In this section are specified the meanings of the main terms used for the application of this guide book.

Published article: adocumentpublished by the author/authors. In this case, there are taken into consideration the articles published in ISI indexed journals or in prestigious international data basis.

Patent of invention: a title of protection which gives to the titular an exclusive right of exploitation of the invention object and also the right to forbidden to the third persons (physical and judicial persons) to exploit the invention object.

The university's capacity of supporting postdoctoral programmes: the existence of the human and financial resources at the level of the university and also of a postdoctoral programme.

Scientific book: book written on the basis of the proper scientific activity. The didactic papers are excluded.

Research: creative activity which brings a contribution to knowledge, understanding and innovation with an economic relevance.

Researcher: is the person involved in the conceiving or creating of new knowledge, products, processes, methods and systems and also in their management. The definition refers to any person who is professionally involved in the research-development activity, in any stage of his/her career, regardless of classification. This includes any type of research: basic, strategic, applied ones, experimental development and knowledge transfer, innovation and counseling, supervision and training capacities, knowledge and intellectual copy rights management, the exploitation of the research results or scientific publishing.

Researcher subjected to RRAE evaluation is the employed person with the basic norm (with an individual labour contract) in the university, at 31-st of December, 2010.

PhD Advisor: can be an academician, a correspondent member of Romanian Academy, a full professor and a scientific researcher degree I, who got the legal right to supervise post graduates.

RRAE domain coordinator: the employed person with the basic norm (with an individual labour contract) in the university, at 31-st of December, 2010 and who is appointed by the Rector as responsible for the research evaluation from a certain domain covered by the respective university.

Evaluation criteria: principles on the basis which is done the classification of the universities from Romania as far as the research activity concerns. In the actual methodology, there are taken into account four criteria for the research evaluation from the universities.

Evaluation domain: is one of the forty two research domains described in this guide book.

The Romanian Research Assessment Exercise (RRAE or "the exercise"): an instrument of measuring the research quality from the universities from Romania, and also of identification of the universities with a potential of becoming excellency universities.

Quality factor: a factor settled by the evaluator experts on the basis of the qualitative analysis of the documents from the evaluation file.

Impact factor: the average number of citations from a year of the articles published by the researcher in the preceding two years.

Evaluation indicator: the numerical quantified form of a descriptor.

Innovation: activity oriented to the generating, assimilating and valuing of the results of the research-development in the economic and social area.

Invited papers at prestigious international conferences: papers presented at international conferences and published in the documents of that conference.

University mechanisms for attracting young researchers: the existence of some proper instruments at the university level (example: research programme) and financial facilities dedicated to the young researchers.

Research Evaluation Methodology: assembly of proceedings (information and integrated procedures) used in the achievement of the research activity evaluation on scientific domains, from the universities from Romania.

Products and innovative services: products/services with an economic impact provable by the effects produced by their application.

Visiting professor at prestigious universities: professor invited at a famous university for a long term period.

Achievements subjected to copy right law: achievements referring to creation, defined as a process of research and innovation from the domains: architecture and art.

The research results: the contribution to knowledge, understanding and innovation, with a socio-economic relevance.
